

StudCraft - 3v3 Quick Sheet

The Scenario

Warband: 3 minifigures each. 2 or more players.

Game ends: when only one warband still has a model on the battlefield.

Winner: that warband. No turn limit, no draw.

Before Turn 1 (FLOW-001)

Agree battlefield size > Agree **Deployment**

Volume (W x D x H in **UB**) > Build forces >

Deploy > Determine **Priority**

A scenario may restrict or extend the rules, never contradict them. (FLOW-013)

The Turn

Priority: every player rolls 1D6. Highest to lowest is the **Activation Order**. Reroll ties among the tied players only. (FLOW-003)

Priority holder: chooses once - activate now keeping their place, or cede and drop to last. (FLOW-003)

AP: exactly 3 per activation, every unit, always. (CORE-006)

Activation: once per **Turn**. Ends when the **AP** are spent or the player stops. (FLOW-004)

Spend **AP** in any legal order. Move / Move / Attack is legal, so is Rotate / Move / Attack. (FLOW-007)

Activate one unit at a time down the order, skipping players with none left. (FLOW-002)

End of Turn (FLOW-009)

Temporary effects > **Scenario** effects > Roll

Priority again

Movement

Forward: 4 **UB** (12 studs) - 1 **AP** (INF-002)

Backward: 4 **UB** (12 studs) - 1 **AP**. **Facing** unchanged. (INF-004)

Sideways: 3 **UB** (12 studs) - 1 **AP** (INF-003)

Rotate: any facing - 1 **AP**. No measuring. (INF-005)

Wounded: 2 **UB** max in any direction - 6 studs forward or back, 8 sideways. (INF-012)

Obstacles (INF-006, INF-007, INF-008)

1-3 layers cross freely, no extra cost

4-6 layers climb, +1 **AP** per obstacle

7+ layers impassable without slope, stair or ramp

No diagonals. Combine legs; each leg is its own action and its own 1 **AP**. (MOVE-007)

Each move is measured on its own: 2 **AP** is two moves of 4 **UB**, not one of 8. (INF-002)

Measure along the direction of travel, from the face of the base that leads. (MOVE-003)

Shooting

Sequence (CBT-001)

Declare weapon > Declare target > Line of Sight > Range > Roll > Count **Impacts** > Defender resolves

Cost: 1 **AP** per weapon system, however many dice it makes. (CBT-001)

Range: weapon length x 6. A 4-stud weapon reaches 24 studs; a 6-stud, 36. (WPN-005)

Attack Dice: 1 per functional muzzle. **Muzzle** size changes strength, never the count. (WPN-006)

Attack Roll (CBT-005)

4-6 1 **Impact**

1-3 no **Impact**

Wounded attack: roll 2D6, keep the LOWER, then read it above. Same dice count. Never stacks. (CBT-015)

Line of Sight is physical: if you can see it, you can shoot it. (CORE-009)

Any legally targetable part visible from the attacker's viewpoint is enough. (CBT-002)

A functional muzzle is a visibly round opening. Square pieces are not muzzles. (WPN-002)

Damage

Per Impact (DMG-008)

Choose component > **Geometry Check** >

Damage Roll > State change

Strength: muzzle size x 3. 1x1 = 3, 2x2 = 6, NxN = 3N. (WPN-021)

Resistance: thinnest material the **Impact** crosses, in plate layers. Plate 1, brick 3. Empty space counts nothing; walls never add up. (DMG-003)

Geometry Check (DMG-013)

Str < Res **Impact** stops, no die rolled

Str >= Res roll for damage

Damage Roll (DMG-014)

1-3 state advances one step

4-6 no effect

States (DMG-002)

Operational upright

Wounded seated

Dead removed

Wounded changes only the capability it provides - infantry moves shorter (INF-012), a weapon rolls the **Wounded** attack (CBT-015). **Resistance**, **Strength** and **AP** costs untouched. (DMG-002)
