

StudCraft - 3v3 Quick Sheet

The Scenario

The ruleset defines how models behave; the scenario defines the game. This is ours.

Three minifigures per warband. Two or more players.

The game ends when only one warband still has a model on the battlefield.

That warband wins. No turn limit, no draw.

A scenario may restrict or extend the rules, never contradict them. (FLOW-013)

Before **Turn 1**: agree battlefield size, agree the **Deployment Volume** (W x D x H in **UB**), build forces, deploy, determine **Priority**. (FLOW-001)

End condition says when the game stops; victory condition says who wins. (FLOW-010)

The Turn

Priority: every player rolls 1D6. Highest to lowest is the **Activation Order**; first place holds **Priority**. Reroll ties among the tied players only. (FLOW-003)

The **Priority** holder chooses once: activate now keeping their place, or cede **Priority** and drop to last while everyone else moves up. (FLOW-003)

Activate one unit at a time down the order. Skip players with none left. Continue until every unit has activated. (FLOW-002)

A unit activates exactly once per **Turn**. Its activation ends when the **AP** are spent or the player stops. (FLOW-004)

Every unit gets exactly 3 Action Points per activation. No unit ever gets more. (CORE-006)

Spend **AP** in any legal order. Actions combine freely: Move / Move / Attack is legal, so is Rotate / Move / Attack. (FLOW-007)

End of **Turn**: resolve temporary effects, then scenario effects, then roll **Priority** again. (FLOW-009)

Movement

Forward: up to 4 **UB** (12 studs). 1 **AP**. (INF-002)

Backward: up to 4 **UB** (12 studs). 1 **AP**. **Facing** does not change. (INF-004)

Sideways: up to 3 **UB** (12 studs). 1 **AP**. (INF-003)

Rotate to any facing: 1 **AP**. No measuring. (INF-005)

No diagonal movement. Reach an off-axis square by combining legs; each leg is its own action and its own 1 **AP**. (MOVE-007)

Each move is measured on its own: 2 **AP** of movement is two moves of up to 4 **UB**, not one of 8 **UB**. (INF-002)

Measure along the direction of travel, from the face of the base that leads. (MOVE-003)

Wounded: at most 2 **UB** in any direction - 6 studs forward or back, 8 studs sideways. Everything else about the move is unchanged. (INF-012)

Obstacle up to 3 plate layers (1 brick): cross freely, no extra cost. (INF-006)

Obstacle 4 to 6 layers: climb for 1 extra **AP** per obstacle crossed. The climb does not extend the move's distance limit. (INF-007)

Obstacle 7+ layers: impassable without a slope, stair or ramp. (INF-008)

Shooting

1 **AP** per weapon system attacking, however many dice it makes. Declare weapon, declare target, check Line of Sight, check range, roll, count **Impacts**, defender resolves them. (CBT-001)

Line of Sight is physical: if you can see it, you can shoot it. (CORE-009)

Any legally targetable part being visible from the attacker's viewpoint is enough. (CBT-002)

Range = weapon length x 6. A 4-stud weapon reaches 24 studs; a 6-stud weapon, 36. (WPN-005)

A functional muzzle is a visibly round opening on the weapon front. Square pieces are not muzzles. (WPN-002)

Attack Dice = functional muzzles, one D6 each. **Muzzle** size changes strength, never the number of dice. (WPN-006)

Attack Roll, per die: 4-6 scores one **Impact**, 1-3 nothing. A die can never score more than one. (CBT-005)

Wounded attacker or **Wounded** weapon: for each Attack Die roll 2D6 and keep the LOWER, then read it as above. Same number of dice. **Wounded** states never stack. (CBT-015)

Damage

Resolve each **Impact** on its own: pick the component hit, **Geometry Check**, **Damage Roll**, state change. (DMG-008)

Impact Strength = muzzle size x 3. A 1x1 muzzle is 3, a 2x2 is 6, an NxN is 3N. (WPN-021)

Resistance is not a statistic: it is the thinnest material the **Impact** must cross, in plate layers. Plate = 1, brick = 3. Empty space counts for nothing; walls are never added together. (DMG-003)

Geometry Check: Strength below **Resistance**, the **Impact** stops and no die is rolled. Strength equal or above, continue. (DMG-013)

Damage Roll, by the defender, one D6: 1-3 damages and advances the state one step, 4-6 does nothing. Note this reads opposite to the **Attack Roll**. (DMG-014)

States: Operational, then **Wounded**, then Dead. Infantry shows it physically: upright, seated, removed. No tokens. (DMG-002)

Wounded changes only the capability it provides - infantry moves shorter (INF-012), a weapon rolls the **Wounded** attack (CBT-015). **Resistance**, Strength and **AP** costs are untouched. (DMG-002)
